

ENVIRONMENTAL POLICY

The activities at our sites cover a wide range of packing, transport and storage operations in the heritage sector. There are many environmental issues relating to the use of recommended packing materials, which are oil based products; our fleet of diesel powered art spec vehicles and the climate control that is required as part of our services. Within the constraints of continuing to provide museum standards Gander and White is committed to minimising the impact of our activities on the environment.

The key points of our strategy are:

- Minimise waste by seeking to reduce, reuse and recycle where possible. Prevent pollution and promote recycling both internally and amongst our customers and suppliers.
- Source and promote the use of packing materials that minimise the environmental impact of both production and distribution
- Reduce energy consumption by developing energy efficient buildings and operations. Monitor energy use and improve awareness.
- Operate and maintain company vehicles as far as reasonably practical with due regard to environmental issues and clients' security and insurance requirements.
- Ensure compliance with all relevant environmental legislation in the industry sectors we operate.
- Seek to continuously improve environmental performance and demonstrate a commitment to prevent pollution.
- Raise awareness of environmental issues among staff and enlist their support in improving our performance.

The Senior Management of Gander and White will endeavour to ensure that the Environmental Policy is reviewed regularly and implemented throughout the company.
